Professional Summary:

Final-year Computer Science (AI & ML) student who builds and ships end-to-end data and AI products — from SQL pipelines and ML models to live dashboards and REST APIs. I've deployed 10+ apps to production, including an AML transaction-monitoring system that scores accounts for money-laundering risk at ROC-AUC 0.96. I like owning a problem from raw, messy data through modelling and into a live interface people can actually trust.

Education:

QUALIFICATION	INSTITUTION	YEAR	SCORE
B.Tech (CSE – AI & ML)	Shri Vaishnav Vidyapeeth Vishwavidyalaya, Indore	2022 – 2026	7.16 CGPA
HSC (12th)	Santaji Mahavidyalaya, Nagpur	2022	69.33%
SSC (10th)	R.S. Mundle School, Nagpur	2020	82.6%

Experience:

- **Python Developer Intern – AlphaWizz** (Jan 2026 – Apr 2026)
 - Developed and maintained Python backend services supporting internal data workflows, API integrations and automation pipelines.
 - Built FastAPI / Django modules with clean interfaces, unit tests and production-ready error handling.
 - Contributed to code reviews, deployment processes and documentation alongside senior engineers.

Projects:

- **FinSentry:** Live AML transaction-monitoring system that scores accounts for money-laundering risk. ([Code](#) · [Report](#))
 - Combined an unsupervised ML ensemble (Isolation Forest, Local Outlier Factor, Mahalanobis distance) with an AML typology rule engine and money-flow network analysis.
 - Achieved ROC-AUC 0.96 with 0.93 precision and 0.90 recall; ranks alerts LOW / MEDIUM / HIGH / CRITICAL with explainable reason codes.
- **Stock Predictor Pro:** Real-time dashboard tracking 90+ assets across stocks, crypto, forex and commodities — live on Vercel.
 - Streamed live prices via Yahoo Finance with per-symbol caching, technical indicators (RSI, MACD, Bollinger Bands) and a composite BUY/SELL/HOLD signal with confidence scoring.
- **Customer Churn Analysis:** End-to-end SQL → ML → API → dashboard pipeline predicting customer churn, deployed on Streamlit Cloud. ([Code](#))
 - Trained Logistic Regression, Random Forest and XGBoost with GridSearchCV tuning; served inference via a FastAPI endpoint and an interactive dashboard.
- **Phantom:** Django-powered movie discovery and booking platform with TMDb integration and seat-selection checkout. ([Code](#))
 - Built an end-to-end booking flow with session-based authentication and a PostgreSQL-backed schema, deployed on Render.

Skills and Technologies:

❖ Python	❖ SQL	❖ Excel
❖ Pandas / NumPy	❖ scikit-learn	❖ Data Visualization
❖ FastAPI	❖ Django	❖ Streamlit
❖ MCP Server	❖ Azure Cloud	❖ Git / GitHub

Certifications:

- [Joy of Computing using Python](#) – IIT Ropar (NPTEL 2024)
- [Artificial Intelligence for Economics](#) – IIT Kharagpur (NPTEL 2024)
- [Developing Soft Skills and Personality](#) – IIT Kanpur (NPTEL 2024)

Participation and Extracurricular:

- Reached the final round of the **Odoo Hackathon**.
- Reached the final round of **Finance Veda**.
