Professional Summary:

Computer Science Engineering student with hands-on exposure to data engineering, AI, machine learning, and data visualization. I enjoy working with data and building dashboards that help turn information into meaningful insights for better decision-making. I am a quick learner with a strong problem-solving mindset, comfortable adapting to new tools and technologies. I stay focused on delivering reliable, well-structured solutions while continuously improving my skills to meet real business and organizational needs.

Education:

QUALIFICATION	INSTITUTION	YEAR	SCORE
B.Tech (CSE – AI & ML)	Shri Vaishnav Vidyapeeth Vishwavidyalaya, Indore	2022 – 2026	7.16 CGPA
HSC (12th)	Santaji Mahavidyalaya, Nagpur	2022	69.33%
SSC (10th)	R.S. Mundle School, Nagpur	2020	82.6%

Experience:

- Python Developer Intern – AlphaWizz**
 - Developed and maintained Python backend services supporting internal data workflows, API integrations and automation pipelines.
 - Built FastAPI / Django modules with clean interfaces, unit tests and production-ready error handling.
 - Contributed to code reviews, deployment processes and documentation alongside senior engineers.

Projects:

- Phantom:** Built a Django-powered movie discovery and booking platform with TMDB integration and seat-selection checkout.
 - Designed end-to-end booking flow with session-based authentication and a PostgreSQL-backed schema.
 - Integrated the TMDB API for real-time movie metadata, posters and ratings.
 - Configured CI-driven deployment on Render with a production-ready frontend.
- Stock Predictor Pro:** Built a real-time stock dashboard with 90+ assets across stocks, crypto, forex and commodities — live on Vercel.
 - Streamed live prices via Yahoo Finance with sub-minute refresh and per-symbol caching.
 - Implemented technical indicators (RSI, MACD, Bollinger Bands, MA20/MA50) entirely client-side in TypeScript.
 - Engineered a blended price forecaster (linear regression + EMA momentum bias) projecting 14 days forward.
 - Designed a composite trading signal (BUY/SELL/HOLD with confidence) from RSI, MACD crossover and MA-trend alignment.
- Customer Churn Analysis:** End-to-end ML pipeline predicting customer churn using SQL, Python and ensemble models, deployed live on Streamlit Cloud.
 - Engineered a SQLite schema with analytical queries on a 5,000-customer synthetic dataset.
 - Trained three models (Logistic Regression, Random Forest, XGBoost) with GridSearchCV hyperparameter tuning.
 - Exposed inference via a FastAPI endpoint and shipped an interactive Streamlit dashboard for predictions and feature-importance analysis.
 - Dockerized for reproducible deployment, with model versioning and confusion-matrix reporting.

Skills and Technologies:

❖ Python	❖ SQL	❖ MCP Server
❖ Azure Cloud	❖ Data Engineering	❖ Data Visualization
❖ FastAPI	❖ Django	❖ Streamlit

Certifications:

- Joy of Computing using Python** – IIT Ropar (NPTEL 2024)
 - Completed a course on Python fundamentals using practical examples.
- Artificial Intelligence for Economics** – IIT Kharagpur (NPTEL 2024)
 - Studied machine learning applications in economic modeling with a focus on mathematical foundations.
- Developing Soft Skills and Personality** – IIT Kanpur (NPTEL 2024)
 - Covered communication, teamwork and behavioral skills.

Participation and Extracurricular:

- Reached the final round of the **Odoo Hackathon**.
- Reached the final round of **Finance Veda**.
